

Fun With Science!

Bloomsgurg Blended fourth-grade students in Mrs. McNamara's science class have been busy conducting science experiments! In these pictures, you can see the student-made volcanoes (including the erupting lemon volcano experiment laid out at the bottom of the page) and science-themed posters. In the photo directly to the left, you can see a student conducting an experiment to find out if warm water floats on cold water. When he checked his hypothesis, he found that he was correct: the hot water did indeed float on the top and the cold water sank to the bottom.
